

Milestone Delivery #1
CSE-2102 Group Project - Spring 2026
Deadline: 11:59pm, Feb 20

Project Board

- Create a single team Trello board that the entire group will use to collaborate on the group project
- Invite the other team members to join the board
- Invite all TAs in your lab section to join your Trello board
- Determine if your team will use Scrum or Kanban
- Populate your board with cards for tasks relating to this Milestone #1 delivery. In other words, begin using your board to plan all the activities that are needed to complete milestone #1.
- Assign tasks among the team members. (Note: do not assign any tasks to or create cards for the TAs. They are simply observers to your process.)
- Keep the project board up-to-date throughout the week leading up to the delivery date by moving cards or adding cards, and by changing assignments as necessary. (You will not delete cards/tasks when they are completed. Instead, you will move them if you are using Kanban or simply complete them if using Scrum.)

GIT Repo

- One team member should create a team git repo
 - Owner = the "CSE2102-Spring26" GitHub Organization
 - Name = use your team number that was given to you. For instance, if you are team 27, then your repo should be named "cse2102-spring26-Team27"
 - Make the repo **PRIVATE**!
- Add the other team members as collaborators to the repo with "Admin" rights
- All team members need to connect their local computers to the git repo. Use the clone command if you were not the team member that created the repo.
- One team member should create the "develop" branch and push it to the server.
- Create two [branch protection rules](#), one for main and one for develop. You want to prevent anyone from deleting these two branches. Test your rules by trying to delete the branches.
- Each team member should create a feature branch off of develop.
 - Using Cursor, edit the README file and add your first name, last name and netid
 - Add/Commit/Push your feature branch to the server
 - Open a Pull Request to merge your branch into develop. Assign the PR to someone else on the team. (Coordinate so that each team member is assigned one PR to complete.)

- Each team member should complete and close someone else's PR. Check the box to delete the feature branches when the PR is complete.
- One team member should add the link to the Trello board into the README file
- When all git tasks are done for this milestone, one team member should submit a PR to merge develop to main. Another team member should complete and close that PR.
- Everyone should do a "git fetch" locally after team members complete tasks on the server. And everyone should do "git pull" on their various local copies of develop and main.

Grading

- You will meet with a TA during lab. Your team may not yet be complete with all the milestone tasks, but your TA will be looking at the current status of your project board during this check-in and gauging the team collaboration and communication. Team members that tried to be a lone-wolf (doing all the work) or the ghost (doing little to no work) will lose points from their individual grade for this milestone. But in general, all team members will typically get the same individual grade for this group milestone delivery.
- One team member should submit a PDF to HuskyCT containing a screenshot(s) of your project board by the milestone deadline.
- Your git repo will be graded based on the last commit/PR prior to the milestone deadline.
