

Milestone Delivery #2
CSE-2102 Group Project - Spring 2026
Deadline: 11:59pm, Feb 27

Project Board

- Create cards for all of the work in this milestone and assign cards to team members
- Each team member should update the board as they progress with their tasks

Personas

- Create 4 different personas that represent the types of users you imagine would use the Local Farm Marketplace website.
- Each persona must have: a picture and basic biographic information
- Use the lecture slides as an example of how to develop each persona more deeply

Requirements

- Use the provided requirements in the Group Project document as a starting point.
- Turn the provided paragraphs into a bulleted list of succinct requirements
- Ask questions on the #group-project-questions Discord channel if you need any clarifications
- Monitor the #group-project-questions Discord channel for answers given to other groups. Incorporate these changes into your requirement list.
- Make sure you have at least three non-functional requirements in your list
- Review your requirement to make sure they are: Testable, Clear, Complete, Trackable, Necessary, and Comprehensible

Scenarios

- Create at least 4 scenarios that imagine one of your personas using the system
- Scenarios are longer-winded descriptions. These will stimulate your thinking and allow you to progress the next sections well.

User Stories

- Create at least 12 user stories that describe a user doing something in your system
- User stories are succinct one-sentence statements in the format: "As a <role>, I <want / need> to <do something>"

Features

- Develop a list of features for your Local Farm Marketplace
- Your feature list should flow naturally from your User Stories, Scenarios, and Requirements. If you think of a feature that is not reflected in your user stories or scenarios, consider creating a new user story or scenario.
- You are not required to have a specific number of features for this milestone, but you need to list all of the features that can logically be obtained from the User Stories, Scenarios, and Requirements you submit in the milestone.

- Check your feature list to make sure they define the: Input, Activation, Action, and Output
- Verify your features are: Independent of one another, coherent (single purpose, no side effects), and relevant to the user.

Grading

- Create a folder in the root of your git repo called "documentation". For each artifact,
 - Store the source file of each artifact in the documentation repo folder
 - Store PDF of each artifact in the documentation repo folder
- **Submit one of the PDFs to HuskyCT**
- You will meet with a TA during lab. Your team may not yet be complete with all the milestone tasks, but your TA will be looking at:
 - Current status of your project board
 - Current status of your Personas, Requirements, Scenarios, Stories and Features
 - Team collaboration and communication.
